

Equal Sets

Each child wants a pet. Draw a line from each child to a pet and find out whether there are enough pets to go around.

Tick (✓) the correct face.

Are all the children 😊 or ☹️?

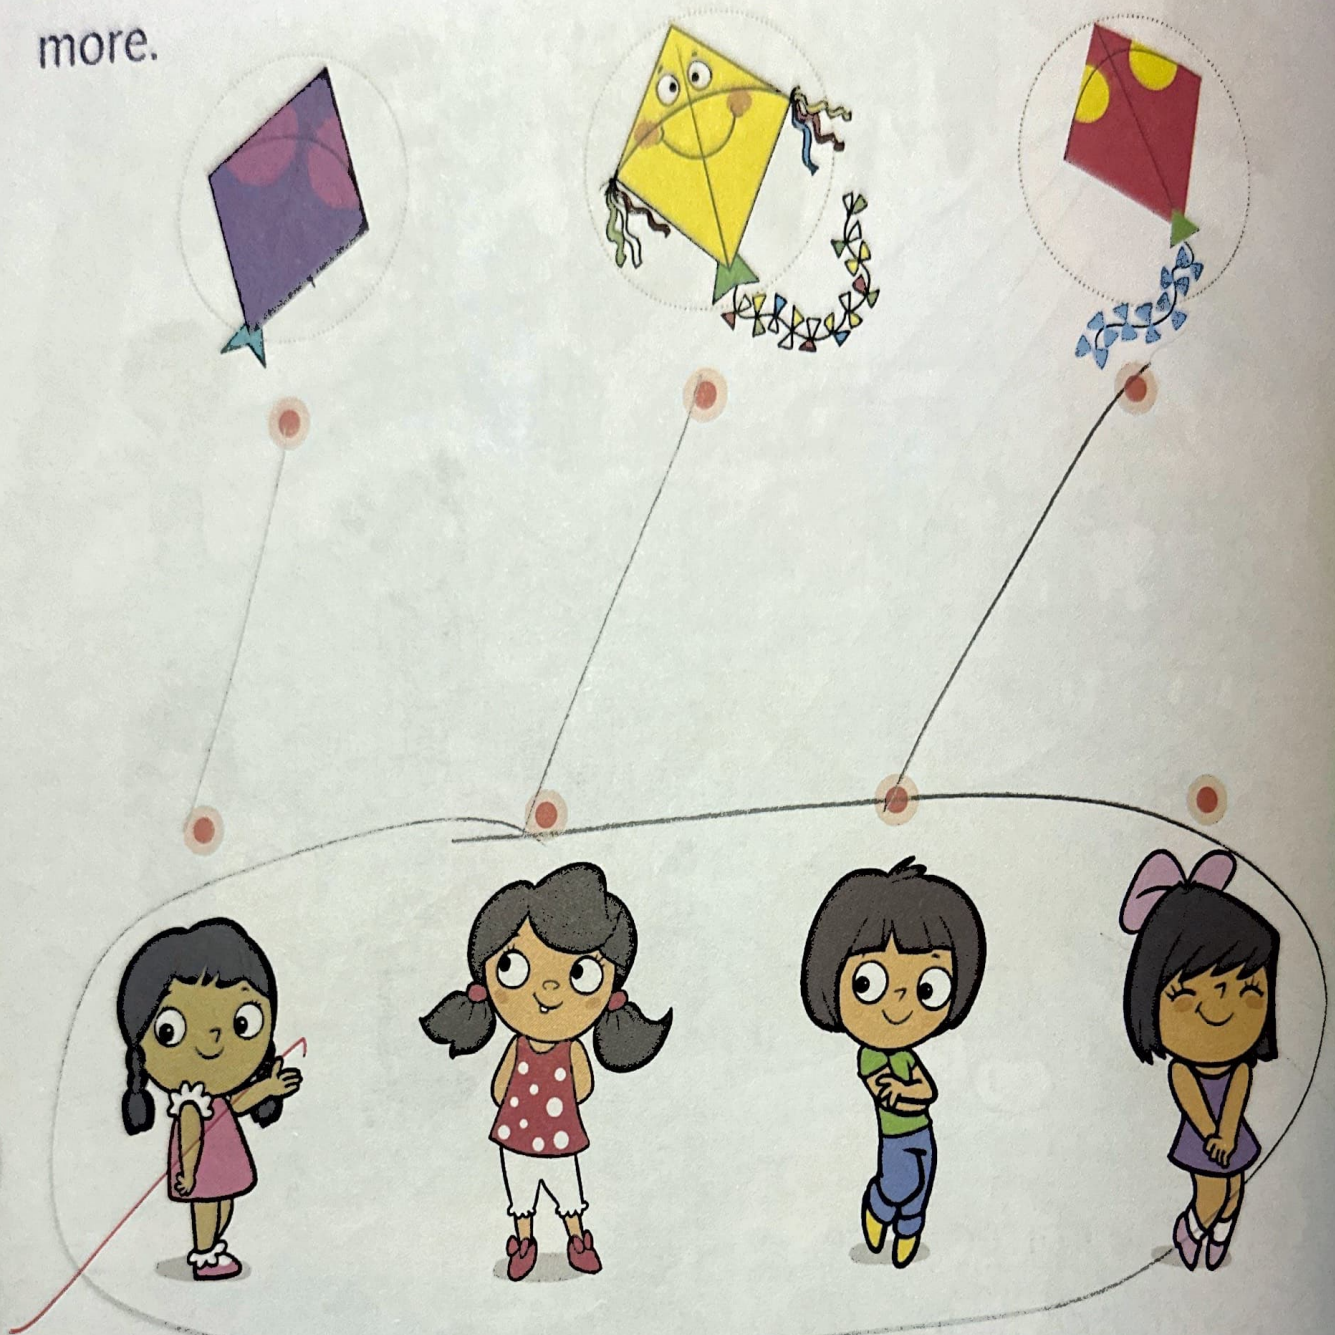

Teacher's Tips

Concept: Recognition of sets with equal numbers

Introduction: Show two sets of objects with the same number in each set. Examples could be three pencils, three erasers, three chocolates/bags and three children. Ask the children 'Is there a bag for each child?' Repeat the question with the other objects.

More

Draw a line from each kite to a child. Are there more kites or more children? Circle the set (kites or children) that has more.

Teacher's Tips

Concept: Comparing sets to determine which one is more

Introduction: Use related objects such as empty glue sticks and their lids. Place four glue sticks and three lids on a desk. Ask the child to put a lid on each glue stick. Ask them why is a stick there without a lid. Make the children say that there are more sticks than lids. Repeat this activity using other objects such as leaves, pebbles, pencils, chairs, books, and so on.

Less 🖐️

Draw a line from each frog to the rock. Are there less frogs or less rocks?

Teacher's Tips

Concept: Comparing sets to find which set has less

Introduction: Show the children two sets of objects with different numbers and ask them which one has less. For example, have five children and three books. Then pair one child with a book in the other set. Help the child to say that there are less books than children.
